PROFILE

Mobile App Developer with 3+ years of experience building production Flutter applications. **Upwork Top Rated freelancer with a 100% Job Success Score**, working with clients worldwide. Strong technical foundation in Flutter, Dart, REST APIs, Python (FastAPI, Django), cloud backend services, and Supabase, with hands-on experience in regression testing, UI and cross-device Android compatibility testing, API validation, and defect reporting. Able to identify, reproduce, and resolve issues across the front end and backend before release.

TECHNICAL SKILLS

- **Mobile:** Flutter, Dart, MVVM, Clean Architecture
- **Backend / Fullstack:** Python (FastAPI, Django), RESTful API Design, Cloud Backend Services
- **Databases & Cloud Data Services:** Cloud NoSQL Database, Supabase, PostgreSQL, MongoDB, SQL
- **Tools:** Git, GitHub, Postman, Swagger / OpenAPI, Android Studio, VS Code, Figma, AI Tools (Claude, ChatGPT, GitHub Copilot)
- **Other:** Data Structures & Algorithms, Competitive Programming, Agile Development

PROFESSIONAL EXPERIENCE

Mobile Developer Intern (Flutter) – Internship Program **2023 – 2024**
MinT • Addis Ababa, Ethiopia
- Worked with a team on mobile application development, building Flutter apps with cloud backend services for auth, storage, and real-time features.
- Ran regression and manual UI testing across Android devices, reporting defects that improved stability.
- Built and validated backend APIs, checking request/response behavior and data integrity.

Software Engineering Trainee – Fullstack & Mobile Development **2025 – 2026**
African To Silicon Valley (A2SV) • Adama, Ethiopia
- Worked with a team on mobile application development using Clean Architecture, aligned with data structures and algorithms (DSA) practice.
- Built and manually tested RESTful APIs with Python (FastAPI) and cloud backend services, catching edge-case failures.
- Ran regression testing across fullstack features, tracing issues from the Flutter front end through backend services and resolving defects with peers.

PROJECTS

ShopAlly (A2SV Team Project, Mobile Team Lead) — Flutter, Dart, AI Integration, Go backend
- Led the mobile team on an AI-powered Alibaba shopping app: users describe needs in their own language and get matching products.
- Built a creative, user-friendly UI; won 1st place in the A2SV G6 project phase for code quality and teamwork.

Imerzn (US Tour & Travel Agency Client) — Flutter, Dart, REST APIs, MVVM
- Worked on the mobile application side for a US tour and travel agency, connecting them with travelers and supporting their shipping workflow.
- Integrated endpoints with the client's active backend system and built a user-friendly interface using the Model-View-ViewModel (MVVM) pattern.

Brunch Sister (US Client) — Flutter, Dart, Supabase
- Moved an event creation and management platform from Base44 to a live mobile application using Flutter and a Supabase backend.

SmartFarmer (Hubstaff Client from India) — Flutter, Dart, REST APIs, AI Integration
- Built a mobile app that captures images, sends them to an AI dataset backend, and displays the returned result.
- Integrated a chat with an AI bot and a library of books on agricultural diseases.

Yeneqal (US Client) — Flutter, Dart
- Built an Amharic-augmented language learning mobile app in Flutter for a US client, designed for young children.
- Created a kid-friendly tablet mode and tap-to-hear audio so children can tap content and hear it spoken, supporting learning through listening and repetition.

AutoRent — Automated Rental Platform (Local Client) — Flutter, Cloud Backend Services
- Built a vehicle rental platform for a local client and its local customers with real-time availability, automated booking, and payments; tested booking and payment flows end-to-end.

Betlink — Flutter, Dart
- Built a mobile property marketplace for buyers and sellers; regression-tested search, filtering, and messaging across Android devices.

AI Health Assistant — Flutter, Dart, TypeScript, MongoDB, SQL
- Created a user-friendly mobile UI (APK) for an AI health app with multilingual triage and symptom checks, integrating it with a backend created with TypeScript; validated AI queries and offline persistence.

EDUCATION

Bachelor's, Software Engineering — Adama Science and Technology University **2026**
African To Silicon Valley (A2SV) — Software Engineering Program (1 year) **2025 – 2026**
- Problem solving, DSA, LeetCode, and competitive programming, then a mobile app development phase using Clean Architecture.

Software Engineering — ALX Software Eng. Africa **2023 – 2024**
Remote, Ethiopia • Certificate: savanna.alxafrica.com/certificates/FzJNsmTyHZ

ACHIEVEMENTS

- **A2SV G6 Project Phase – 1st Place Winner:** Won first place for quality code and good teamwork in the African to Silicon Valley project phase, leading the mobile team on ShopAlly.
- **Upwork Top Rated Badge:** 100% Job Success Score, working with worldwide clients.
- **Hackathon – 1st Place Winner:** Won first place in an Android hackathon by building a mobile app giving students resources, course outlines, and campus navigation tools.

TARGET ROLE

- **Role:** Mobile App Developer (Flutter); open to Flutter, Mobile Application, Cross-Platform Mobile, or Android Developer roles.
- **Work setup:** Open to onsite or remote roles; based in Addis Ababa, Ethiopia; prefer a flexible remote work policy.
- **Preferred stack:** Flutter, Dart, Python, FastAPI, Django, Supabase, Cloud Backend Services, REST APIs, Clean Architecture
- **Looking for:** Clear roles with an IC track, growth as a mobile engineer, challenging mobile problems, and a quiet, product-focused team.
